

## to the workers

We are here today to draw attention to the exploitative working conditions in the meat industry and to express our solidarity with you, the workers. Our protest should be directed against the system of the meat industry with its slaughtering and cutting factories, not against you! We are convinced that not only animals and the environment are particularly affected by the exploitation of this industry, but also you, the workers.

It is not our intention to harm you in any way.

Our goal is to shut down the animal industry to prevent further corona infections.

Our goal is to ensure that you, the workers, are financially, socially and healthily protected in case of plant closures - at the costs of the corporations.

Our goal is to provide you, the workers, with housing that is dignified and meets the requirements of the Corona situation. And not only during Corona.

Our goal is that the slaughterhouses and the other working areas of this industry with the miserable working conditions are closed down and that you get better jobs in other industries.

In the past, other production sites were occupied by workers. These were then continued in a self-organized way.

We may not agree on all points. But maybe we agree that the current situation is not good. Please write to us, or our friends in the field of labour law, so that we can exchange views and possibly develop common forms of resistance. We are interested in your problems and fears as workers in the meat industry. We would like to declare our solidarity with you and work together!
