

SYSTEM CHANGE
NOT
CLIMATE CHANGE

BYE PHW

action camp and mass action of civil disobedience from 12th to 17th July 2021

Climate change is progressing incredibly fast. The amazon rainforest is continuously burning and more and more eco systems are breaking down. One significant reason: Animal agriculture.

To produce animal feed, forests are being annihilated and giant areas are being used to cultivate industrialised monocultures. Liquid and solid manure pollute ground and surface water. At the same time, workers in stables, slaughterhouses, and processing plants are forced to work in inhumane conditions. Sentient animals are seen as commodities. They suffer immensely. In many parts of the world animal agriculture increases the prices of staple foods and the access to land and thereby leads to food scarcity. The Covid-19-crisis has its origins in the destruction of basic access - not least caused by animal agriculture.

In the middle of an ecological crisis agricultural and meat producing organisations register record profits at the expense of humans, animals and everyone's future. That is scandalous!

In a mass action of civil disobedience, we will bring factories of the biggest German poultry farming business in Rechterfeld (Lower Saxony) to a halt, between 12th and 17th July. The PHW-group, known for brands like Wiesenhof and Bruzzler, is one of the main actors in German animal agriculture.

An action camp near the sites is going to be a place of protest, networking and mutual education for a fight against animal agriculture.

Behind the action and the camp stands a huge alliance consisting of various movements. Because it is high time to team up for developing a collective capability to induce a fundamental agricultural change - creative, diverse, and determined.

Together we will stop PHW!

with this action, we demand:

Abolition of animal agriculture! Shutdown of all facilities!

We demand the dispossession of PHW and the transition of all facilities towards ecologically compatible plant processing facilities rooted in solidarity and self-administration of the workers. With a fundamental agricultural change, animal agriculture has to be abolished and replaced by agriculture that is not based on the exploitation of sentient individuals and not profit oriented.

Together, let's be resistant against climate injustice and stand in solidarity with everyone affected by the climate crisis. Together, let's end the exploitation of workers and the violence towards animals.

**for overcoming this capitalist system!
system change not climate change!**

On camp there will be lectures, workshops and discussions. You'll find further information here:
